

CLINIC WORMING PROGRAMME 2012

	<u>DATE</u>	<u>WORMER</u>	<u>TREATMENT OF</u>
	1 st January	Equest or 5 day Panacur	Encysted small red worms
10 weeks	1 st April	Equimax (see note below)	Roundworms, Bots & Tapeworms
10 weeks	10 th June	Eraquell or WEC*	Roundworms & Bots
10 weeks	18 th August	Eraquell or WEC*	Roundworms & Bots
10 weeks	28 th October	Equimax or WEC*	Roundworms, Bots & Tapeworms

*WEC - Worm Egg Count /providing a fecal sample for analysis.

Yards that have relatively static horse populations might like to consider using worm egg counts to determine whether there is any need to worm during the summer months. This can lead to cost savings and significantly reduce the amount of wormers used. Please call the practice if you would like to discuss this further.

Note

1. The worming programme for 2012 is unchanged from 2011. If you followed the 2011 programme and used an equimax in October, then do one of the following:
 - a. April 1st - Use an Eraquell – as there is no need to dose again for tapewormOR
 - b. April 1st - Carry out a WEC and review the results with one of the vets who can create a tailored programme for your horses for the year.
2. New Horses - We recommend that all new horses coming to your yard be given either a single dose of Equest Pramox or a 5-day course of Panacur Guard plus a single dose of Equitape. This is to treat all round and tapeworms (including any encysted larvae) and should be done regardless of previous worming history.
